

In addition to work plank (scaffold) uses, the WorkSafe Ladder Bracket and Guardrail Safety System is also designed for roofing applications where Guardrail protection is essential (as shown below). Siders, roofers, carpenters, painters, home handymen and repair teams will **all** benefit from these smart WorkSafe products.

Attention: All WorkSafe Ladder and Gutter Brackets must be attached to the fascia or solid 2x4 or 2x6 framing, using four #12 -2 1/2" screws (included).

WorkSafe™ Ladder Brackets are designed to secure your ladders in situations where there are no rain gutters or obstructions to fascia boards. They help protect the worker and eliminate damage to property. Ladder Brackets come in 4 styles:

WorkSafe™ Gutter Brackets are designed to secure your ladders in situations where rain gutters were previously installed prohibiting use of standard WorkSafe Ladder Brackets. Gutter Brackets are available in 4 styles:

470615: Double Rail Deep Bracket
For use when both rails of a stacked extension ladder can be secured.

470605: Double Rail Shallow Bracket
For use when both rails of a ladder can be secured.

470610: Single Rail Deep Bracket
For use when ladder rung of a stacked extension ladder cannot be obstructed.

470600: Single Rail Shallow Bracket
For use when ladder rung of an extension ladder cannot be obstructed.

470665: Double Rail Deep Gutter Bracket
For use when both rails of a stacked extension ladder can be secured. Installs through the back of a gutter.

470655: Double Rail Shallow Gutter Bracket
For use when both rails of a ladder can be secured. Installs through the back of a gutter.

470660: Single Rail Deep Gutter Bracket
For use when ladder rung of a stacked extension ladder cannot be obstructed. Installs through the back of a gutter.

470650: Single Rail Shallow Gutter Bracket
For use when ladder rung of an extension ladder cannot be obstructed. Installs through the back of a gutter.

WorkSafe™ Guardrail System

Used in conjunction with the WorkSafe Ladder Brackets and Gutter Brackets, the WorkSafe Guardrail Brackets, Guardrail Carriage, Guardrails and Telescoping End Stops promote a safe work environment for anyone working on work plank (scaffold). **Note:** When using the WorkSafe Guardrail System it is recommended that you secure both rails of the ladders for maximum safety.

470620: Guardrail Bracket - Made from powder-coated steel for long life durability and strength, these Brackets can accept two Guardrails for many different applications especially for roof safety. This system meets OSHA standard for guardrail systems. Easily raised or lowered by one or two workers. **Note:** Use outer openings on Guardrail Bracket when ladders are angled on gable fascia boards, or when ladders are not parallel to each other. This eliminates binding of railing to ladders.

470625: Guardrail Carriage - With the ring on the bottom, slide Carriage onto Guardrail prior to inserting Guardrail into Guardrail Brackets. After placing Guardrail into Guardrail Brackets, WorkSafe End Stops or pins must be installed at each end of Guardrail to secure system. An SRL (self retractable lifeline - not included) must be connected to ring of Carriage. Do not use typical lanyards, they may promote a fall hazard. This product has a 250 lb. rating, do not exceed a one man limit. Do not use multiple Carriages on one Guardrail.

470640: 17' Guardrail - 17' aluminum Guardrails for use with smaller work planks. Guardrails feature multiple pilot holes for flexibility in attaching end stops.

470645: 21' Guardrail - 21' aluminum Guardrails for use with 20' ft work planks. Guardrails feature multiple pilot holes for flexibility in attaching end stops.

470630: Telescoping End Stop - Functions as a locking device to secure Guardrails and acts as a warning to let workers know their coming to the end of the work plank. This helps lessen the chance of tipping or falling off the scaffold. End stops are adjustable to accommodate different soffit depths. Use only WorkSafe replacement parts.

470620

Patent No.: US 7,909,138, B2

Attention:

Always use an OSHA compliant safety harness with a self retractable lifeline (sold separately) in conjunction with the WorkSafe Ladder Bracket Safety System.

470640

470645

Attention:

Use only WorkSafe Guardrails when securing Ladder Bracket Safety System. Failure to use WorkSafe Guardrails may compromise strength of system.

470630

470635: Ladder Rung Hook

This handling device eliminates all the bending down when working on a platform scaffold. It can also be used when just a ladder is necessary for the task. The Rung Hook is an important safety feature and time saver, as it can accommodate and secure nail guns, paint buckets, hoses, radios etc., where you can reach them. How to use: Turn the Rung Hook sideways to enter ladder rung. When all the way through, turn to flat side of Rung Hook. The Rung Hook will not come out until you turn it back to its side.
